

FOR YOUR COMFORT: Contact us to save on heat pumps!

Looking to improve your home's comfort while saving on energy costs? With the right HVAC system and available rebates, upgrading your heating and cooling system has never been more affordable. Take advantage of these money-saving opportunities to boost efficiency, reduce your carbon footprint, and enjoy year-round comfort.

Geothermal heat pump

The most efficient and comfortable heating and cooling unit, according to the Department of Energy (DOE), a geothermal heat pump can be between 300% to 600% efficient on the coldest nights. With Butler County REC rebates, you can save **\$1,000 per ton** on your geo unit. You are eligible for an additional \$50 if your geo has a desuperheater. Are you replacing a geo? You'll receive a rebate of \$500/ton (if original unit is 10+ years old and not covered by warranty).

Air source heat pump

If you are in the market for a system that is not as costly as a geo but still offers a great deal of efficiency, look at an air source heat pump or, if you don't have ductwork to the area that needs heating or cooling, a mini split. The DOE states that an air source heat pump can deliver up to 200% to 400% more heat energy than the electrical energy it consumes. Butler County REC's **\$500 per ton** air source heat pump rebates are for those units 15+ SEER/ 14.3 SEER 2. You are eligible for an additional \$150 per ton if you have automatic gas backup.

Contact Matt or Tyler in the energy services department at Butler County REC to discuss how a geothermal or an air source system, and accompanying rebates, can benefit you and your family!
